

Living Lab Assen

A great innovation opportunity

**HEINRICH
BÖLL
STIFTUNG**

Assen, Sept 28 2016

Assen

Capital of Drenthe

- Capital of province Drenthe
- 67.036 inhabitants; 80.000 inhabitants expected in 2030
- Florijnas project: large programme to improve city's accessibility
- Dutch TT: biggest one day sport event in the Netherlands

Living Lab Assen

Focus on sensor technology

Elements of Living Lab Assen

- Living Lab: open innovation system focussed on end-user
- Co-creation of products and services in a real-life environment
- Living Lab Assen: Living Lab with focus on sensor technology
- Sensor City: technical hart Living Lab Assen

Living Lab Assen

Real time data collection

Living Lab Assen

Focus on urban themes

Sensor City

Technical hart Living Lab Assen

Sensor City Network

- Ramified glass fibre network
- Range can be extended with wireless technologies

Living Lab Assen

Mobility project

Smart usage of sensor data pays off

- Innovation in travel information and traffic management
- Experiment with 150 users
- Focused on improved traffic flow, safety and emission reduction
- Developed services include:
 - Way of driving monitor
 - Smart Routing
 - Smart parking
 - Multimodal travel advice
- Knowledge development on handling Big Data

Living Lab Assen

Sound project

Sound registration and interpretation

- Goal: development and application of knowledge in the area of sound sensors
- Monitoring, interpretation and controlling urban sounds
- Realised:
 - Pilot with 4 audio systems
 - Network audio system for continuous sound analysis
 - Flexible sound measurement systems that can be used at events
 - (Interactive) sound maps

Stichting Sensor City

TT Festival

Living lab for crowd management

**TT
FESTIVAL
ASSEN**

- TT Festival: 4 days event around Moto GP/TT Assen
- Over 160.000 visitors
- Ideal living lab for crowd management innovation
- Collaboration with UT Twente and TU Delft

Smart Sewage in Assen

- Global warming leads to heavy rainfall
- Current sewage systems are not sufficient
- Building infrastructure is expensive
- Assen is working on smart sewage systems using sensor technology

Mobility in Assen

Living Lab for Mobility

- Assen is equipped with an advanced Traffic Management System
- The systems receives real time data from the Sensor City network
- Traffic Management Systems is part of Living Lab Assen

Lange files vanuit Assen na TT-races

Gepubliceerd: 27 juni 2015 17:35
Laatste update: 27 juni 2015 18:20

Het einde van de TT in Assen leidt zaterdag tot lange files op de wegen rond Assen.

Living Lab Assen

SensorCircuit

SensorCircuit Assen

- Unique test facility for areas like:
 - Sport monitoring
 - Crowd management
 - Smart mobility
- Extension of Assen as a 'Living Lab' facility: a safe test environment
- Improve visitor safety and user experience
- Strengthen position of TT as a renowned and progressive circuit

Living Lab Assen

Why should you innovate in Assen?

Operational and reliable network

- Glass fibre and sensor network is operational and reliable
- Network is open to everyone

Relevant test environment

- Assen is a smaller city with large city characteristics
- Relevant scale, but with room for experimenting

Privacy guaranteed

- Network is owned by independent foundation
- Network and supplied data is approved by governmental supervisory agency

Relevant knowledge institutes nearby

- Hanze Institute of Engineering
- Incas3 and Astron
- Connected to knowledge network in Groningen

Safe and efficient data exchange

- Data management system for safe and efficient data exchange

Supported by local government

- Actively supported by and collaboration with local governments
